

A lost attenuation channel — Japanese Gardens

The simplification run lost its blue channel; neither the reference nor the unmodified configuration did. Across the twelve within-cell comparisons the campaign supports, a collapsed run differs from an intact one by a median 0.8 of a baseline standard deviation on the composed image, with the sign inconsistent — the failure is here, in the medium, and not in the picture the metrics score. No cell has both a collapsed and an intact repeat at the one seed whose point cloud is retained, so these differ in configuration as well as in outcome.
